

PRESS RELEASE FROM LUDDEN & MENNEKES ENTSORGUNGS-SYSTEME GMBH

Meppen, May 2026

**Ludden & Mennekes
Entsorgungs-Systeme GmbH**
Essener Straße 13
49716 Meppen
Germany

Phone: +49 5932 7215-0

Managing directors:
Dipl.-Chem. Michael Ludden
Dipl.-Kfm. Werner Pöttker

L&M PRESENTS ITS MULTIFUNCTIONAL PORTABLE COMPACTORS WITH BIN TIPPERS FOR EFFICIENT RECYCLING PROCESSES

EFFICIENCY MEETS FLEXIBILITY: RECYCLING PROCESSES IN PERFECTION

Meppen. For 35 years, Ludden & Mennekes Entsorgungs-Systeme GmbH has been synonymous with well-designed solutions in waste management technology. In this anniversary year, the company is presenting a particularly flexible response to the growing demands of modern recycling processes: Maximized flexibility based on its tried-and-tested portable compactors.

The focus is on Ludden & Mennekes' flagship product, the portable compactor, which, thanks to its versatile functions, is ideally suited for faster and more efficient deployment across different locations. The systems ensure maximum plant availability whilst minimising set-up times. A wide range of applications can be handled quickly and reliably, a decisive advantage when dealing with dynamic material flows and varying material requirements.

A particular highlight is the exhibit at this year's IFAT: a press box fitted with an integrated bin tipper serving as a standing table. This allows numerous technical features to be clearly demonstrated and experienced in a practical setting.

The high flexibility of the multifunctional portable compactor is particularly evident in the well-thought-out design details: The **detachable bin tipper can be** fitted with various mounting options and is suitable for different designs of large waste containers.

If required, it can be easily unscrewed to allow for alternative filling methods. This is complemented by a **foldable front hook**, which not only saves space but is also designed to require less maintenance.

A further advantage is the **2 in 1-lid**, which is also **detachable** and allows various opening options, depending on the application requirements.

The technology is impressive even in the details: divided rollers made from polyamid reduce noise levels, protect the ground and make maintenance considerably easier.

The self-supporting ram ensures additional operational reliability. Thanks to its design, it cannot freeze solid, whilst the special position of the ram allows for flexible filling, regardless of whether this is done manually, by bin tipper or using a wheel loader.

With these well-designed solutions, Ludden & Mennekes once again demonstrates its commitment to combining practical technology with maximum efficiency and flexibility. These portable compactors offer customers a cost-effective and future-proof solution to the challenges of the modern waste management and recycling industry.

Contact us today to find out more about our products and services and discover how we can help you optimise your transport processes.

Ludden & Mennekes Entsorgungs-Systeme GmbH - TECHNOLOGY FOR A BETTER ENVIRONMENT

L&M is a mechanical engineering company specialising in environmental technology; since 1991, it has been designing, engineering and manufacturing high-performance systems for use in the waste management industry.

With four sites in Meppen and Dörpen in northern Germany, Emmen in the Netherlands and Bucharest, this renowned specialist now employs more than 180 employees.

From planning and design through to manufacturing, installation and after-sales service, L&M offers its customers comprehensive support throughout the entire project lifecycle.
