L&M HAS DEVELOPED A CUSTOMER PORTAL FOR THE CENTRAL MONITORING AND CONTROL OF WASTE TREATMENT FACILITIES

LM SMART: A DIGITAL PLATFORM FOR CONNECTED PLANT CONTROL

Meppen. Ludden & Mennekes Entsorgungs-Systeme GmbH is currently working on a digital expansion of its product portfolio: **LM Smart**. The customer portal is still in the development phase and is intended to provide operators with a centralised overview of their entire fleet of facilities in the future.

LM Smart provides operators with various information presented in a clear **dashboard layout**. In addition to the standard L&M designation, each system can also be given a customised customer-specific name or a customer-specific machine number.

Numerous functions can be **accessed or configured** via the relevant system dashboard. This includes, amongst other things, the option to flexibly configure the end position of the ram (front or rear), as well as **monitoring fill levels** at 75 and 100 per cent. On request, these fill-level notifications can also be sent automatically via email or text message.

In **ECO mode**, the system automatically adjusts the number of strokes from one to three depending on the load, thereby saving energy and avoiding unnecessary empty cycles.

The dashboard also displays the current **location of the systems, including their addresses**. At the same time, **status information is shown in real time** and **malfunctions are immediately visualised**, such as when an emergency stop button is activated.

An integrated **ticketing** system allows users to contact Ludden & Mennekes' support team and request assistance directly via the portal. This enables malfunctions to be assessed more quickly and support requests to be dealt with efficiently, without the need for a service technician to visit the site in every instance. **The entire support process is thus significantly simplified and accelerated.**

In addition, existing **IoT infrastructure** can be integrated into the system, and **older machines can also be integrated** using optional retrofit solutions. LM Smart also meets the stringent **cybersecurity** requirements, particularly in the area of critical infrastructure.

The **fleet management system for monitoring available and unused compactors** is currently still in the planning stage and will provide a useful addition to the system in the future.

With **LM Smart**, Ludden & Mennekes forms the base for the transparent, efficient and networked control of modern facilities.

Contact us today to find out more about our products and services and discover how we can help you optimise your transport processes.

The company Ludden & Mennekes Entsorgungs-Systeme GmbH

L&M is a mechanical engineering company specialising in environmental technology; since 1991, it has been designing, engineering and manufacturing high-performance systems for use in the waste management industry.

With four sites in Meppen and Dörpen in northern Germany, Emmen in the Netherlands and Bucharest, this renowned specialist now employs more than 180 employees.

From planning and design through to manufacturing, installation and after-sales service, L&M offers its customers comprehensive support throughout the entire project lifecycle.
